

Profile

I am always **learning** and **teaching**, especially in the world of programming. What drives me is developing **simple** and **efficient solutions** for everyday **problems**, and I enjoy it even more when I can do it as part of a **team**, sharing a good **mate** (argentinian drink meant to be shared).

Spanish - Native
English - B2

Soft Skills

Effective communication	Results oriented approach
Decision making	Problem solving
Leadership	Adaptability

Marco Tignanelli

Web Developer

Experience

Software Engineer - EPAM Systems

March 2024 - Present

We refined and expanded an app to generate personalized meal plans, with an admin dashboard to manage users and suppliers.

Link to the result (live, with real users and everything): [Atuvera](#)

- **Full Stack Development:** Implemented new features and optimized code using **Next.js** and **FastAPI**.
- **Technical Leadership:** Organized and guided the team to improve the development experience and implement best practices, such as **REST** or **KISS**.
- **Refactoring:** Turned a messy implementation into clean, **quality** code: **normalized** the database, **optimized** state management in React — all while still shipping **new features**.

Full Stack Developer - Vates Software

August 2023 - March 2024

We developed two internal apps to improve the company's operations:

- **Commission Calculation:** I worked on the **front end**. We reused prebuilt components and followed a Figma design. The app calculated commissions for project managers.
- **Weighted Quality Indexes:** I worked on the **back end**. We built an API to calculate quality scores (IPCs) based on metrics like sprints and completed project goals

We followed **Scrum** best practices, prioritizing fast deliveries and efficient solutions. The tech stack included **Next.JS** and **Python** with **FastAPI** and **PostgreSQL** for both projects.

Front-End Developer - PPOL

July 2023 - August 2023

Built and plugged in API integrations (Google Maps, GitHub, Spotify, etc.) into the company's main **React** app.

Full Stack Developer - Hueney Ruca

April 2023 - May 2023

We built an e-commerce site as the final project for the SoyHenry bootcamp — and for a real client.

- Used **Next** as full stack and **Supabase** as the database.
- The app let users book vacation cabins, with a **payment gateway** and an admin dashboard to manage listings.

I worked on both the front end and back end, and we followed **Scrum** for fast, continuous delivery.

Education

Information Systems Engineering

[Universidad Tecnológica Nacional](#) | April 2024 - December 2029

Full Stack Web Developer

[SoyHenry](#) | February 2023 - April 2023

Annex I

Certifications

- Full Stack Web Developer
- Python 3 - Advanced
- FastAPI
- Docker and Kubernetes
- Teaching Assistant
